

Practical instances: speedup over the optimized baseline

Core speedup (speedup including initialization)

Instance	Bits	Baseline	Minimum degree	Maximum update	Spectrum update
PRESENT	4	PEIGEN	0.42× (0.49×)	1.66× (1.64×)	0.83× (0.84×)
AES	8	PEIGEN	1.22× (1.22×)	8.24× (8.09×)	2.94× (2.85×)
CLEFIA S0	8	PEIGEN	2.40× (2.41×)	6.52× (6.31×)	2.96× (2.84×)
CLEFIA S1	8	PEIGEN	1.30× (1.32×)	7.96× (7.67×)	3.25× (3.19×)
MISTY1 S9	9	Bitwise	19.32× (18.63×)	5.61× (5.44×)	2.72× (2.30×)
MISTY1 FI	16	Bitwise	992.17× (841.84×)	36.58× (13.08×)	4.25× (2.04×)

Five repeats per instance. Ratios below 1 favor the baseline. FI uses fixed subkey 0.
Update measurements follow fixed transpositions starting from each named instance.
